## Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	15 October 2022
Team ID	PNT2022TMID03986
Project Name	University Admit Eligibility Predictor
Maximum Marks	4 Marks

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form
		Registration through Gmail
		Registration through LinkedIN
FR-2	User Confirmation	Confirmation via Email
		Confirmation via OTP
FR-3	User Details	Submit the documents
		GRE or/and TOEFL Score Sheet
		<ul> <li>Curriculum Vitae (CV)</li> </ul>
		Statement of Purpose (SOP)
		<ul> <li>Letter of Recommendation</li> </ul>
FR-4	User Requirements	Upload all the relevant documents in the
		appropriate location in the website
		Based on the uploads, the system would scrape
		all the necessary information
		The list of all possible university for the
		candidate would be displayed based on the
		scraped information

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	<ul> <li>The system doesn't expect any technical pre-requisite from the user i.e.; even the naïve user can access it.</li> <li>User friendly.</li> <li>Reduced focus on Short Term memory load Focus on Internal Locus of Control.</li> <li>The page would not take a lot of time to load the content and display them (&lt; 30 seconds).</li> </ul>
NFR-2	Security	<ul> <li>Only the authenticated user would be able to utilize the services of the site.</li> <li>Database should be backed up every hour</li> </ul>
NFR-3	Reliability	The system would always strive for maximum reliability due to the importance of data and damages that could be cause by

		incomplete and incorrect data
NFR-4	Performance	<ul> <li>The website can efficiently handle the traffic by service the request as soon as possible.</li> <li>Viewing this webpage using a 56-kbps modem connection would not exceed 30 seconds (quantitatively, the mean time).</li> </ul>
NFR-5	Availability	<ul> <li>Minimal data redundancy</li> <li>Less prone to errors</li> <li>Fast and efficient</li> </ul>
NFR-6	Scalability	<ul> <li>Since an academic portal is crucial to the courses that use it, it is crucial that a sizable number of users be able to access the system at the same time.</li> <li>The admission season is probably when the system will be under the most strain.</li> <li>It must therefore be able to manage numerous concurrent users.</li> </ul>
